# WETStar Flow-through Fluorometer 

These miniature, low cost, low power optical instruments provide comparable performance to other fluorometers at a fraction of their cost, power requirements, and size.

WETStar employs a novel optical flow tube design that lends itself to both pumpthrough and flowthrough operation. It is easily mated with existing CTD packages and available with digital output.

## Chlorophyll-a

Provides calibrated, high-resolution $(60 \mathrm{~Hz}$ signal \& 1 Hz average) measurement of mechanically stimulated bioluminescence for assessing water column ecosystem dynamics.

## Colored Dissolved Organic Matter

Created from decayed biomass, CDOM contributes to coloration of both fresh and marine waters.

Allows measurement of the red pigment in cyanobacteria.

[^0]:    * The CDOM in the WETStar is not calibrated to CDOM, but rather QSD, which has historically been used to establish theresponse and sensitivity of fluorometers usedin CDOM fluorescence applications. Refer to Product Manual for more explanation.
